We Provide Complete IT Solutions And Support For Small, Medium And Large Businesses Across The Seychelles To Cater For All Business Needs.

ABOUT US

Dejacore was originally founded in 2014 as a small consultancy providing IT services locally as well as the UK partnering with a UK Webdesign and Hosting company called Evoke Ltd. Over time Dejacore has expanded, and we now provide a wide array of support, from workstations, networks, servers (on-premise or cloud), Office 365, Exchange online, advisory services, security solutions, and procurement of hardware and software.

Our mission is to harness the power of technology and help businesses get the most out of their technology investment, on premise or in the cloud. Our IT Support offering provides workstation, network, server, cloud, backup, security and advisory services to businesses so they can stay competitive with the innovative use of technology.

BENEFITS

- * Access to broad engineering talent
- * Cost effective and efficient offerings
- * Ability to receive Nationwide Onsite Support
- * Scalable solutions to meet your demands

PROBLEM

We know running an IT department today is not an easy task, especially in the Seychelles. Technology is ever changing and expanding. The demands for support are stringent and around the clock. You have deployments on-premise and in the cloud and need to react to issues quickly. Your user community depends on you to continue to drive efficiencies, maintain security and move the organization forward to stay competitive.

SOLUTION

We understand the value of providing an end-to-end IT support model, along with the ability to scale with your business. Dejacore has the engineering depth, flexible service models, and leading edge solutions to maintain and support your IT infrastructure as an extension of your existing IT team. Our co-managed solutions range from helpdesk, server, network, and advisory services.

WHAT WE DO

Businesses nowadays rely on technology more than ever. They have multiple sites throughout the country or the world. Staffing each office with top IT professionals can be a serious challenge. Whether your headquarters is located on Mahe and you need occasional support on Praslin or you are opening or closing office locations on La Digue, Dejacore team will help your business reach its full potential and overcome problems associated with technology.

IT SUPPORT

We can manage your infrastructure affordably and seamlessly by applying our award-winning IT solutions

ADVISORY

OPPORTUNITY

Within our robust team we provide opportunities for all our technicians to obtain real world exposure to day-to-day IT problems which allows them to harness their skills and provide better support to our clients.

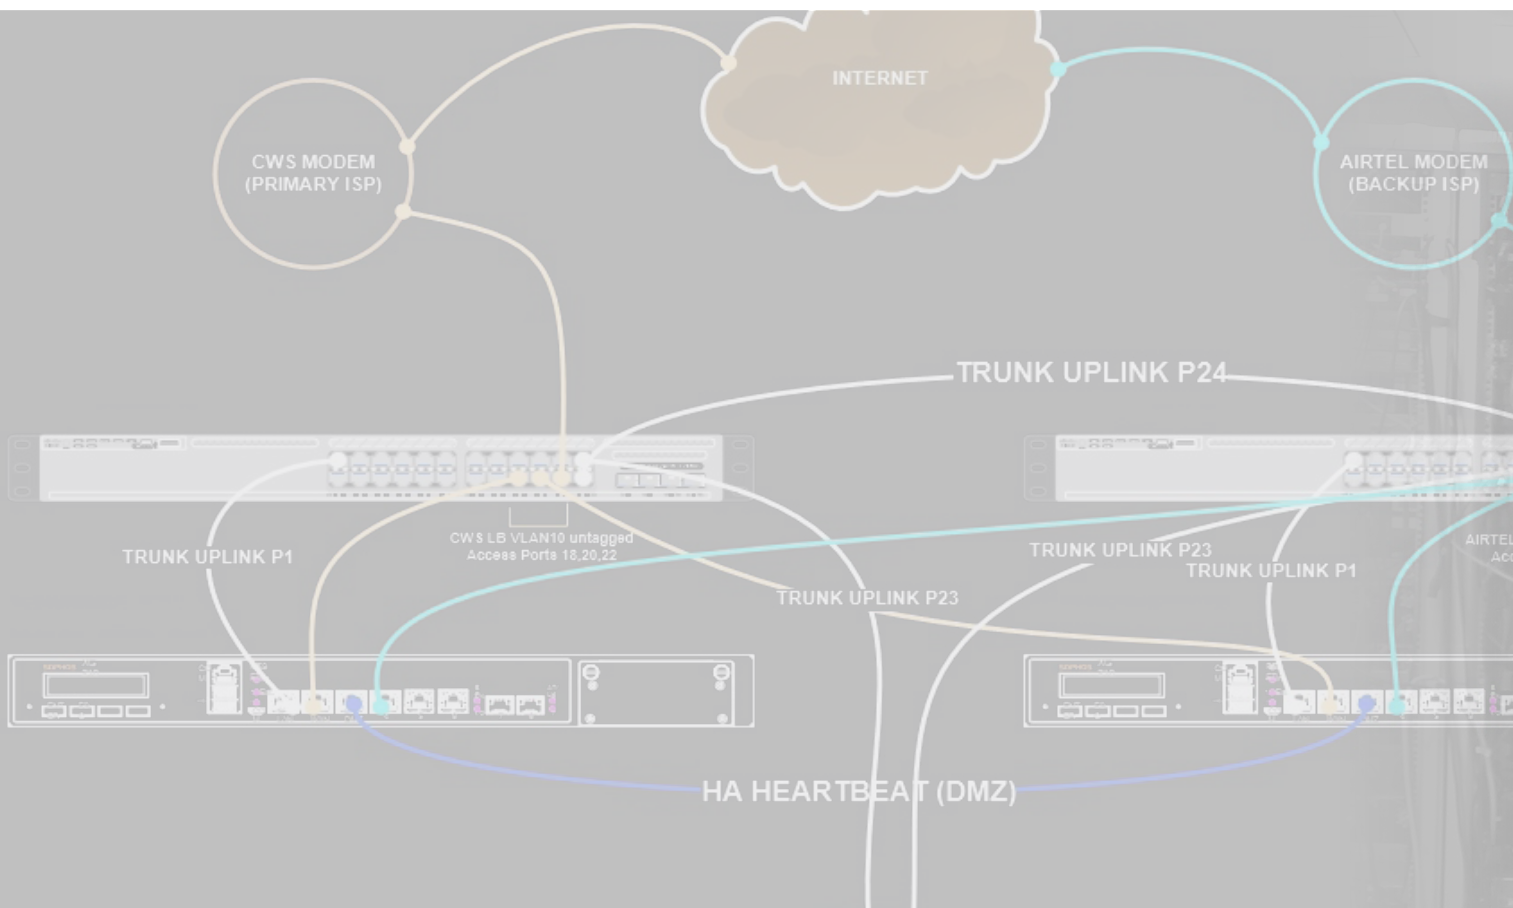

This allows the next generation of support technicians to be exposed to a new learning paths aided by experienced consultants which they can utilize as and when to accomplish their goals.

NOTHING IS BETTER THAN A CLIENT

CASE STUDY

We were commissioned to provide a project to upgrade the SPDF IT infrastructure to a private cloud allowing for levels of redundancy of network, Internet and key server roles.

We worked with our marketing partners to provide the most suitable backup software and UTM device to allow for a high-level of security and notification, as well as auditing.

The project spanned for several months, as migration work required details auditing of existing configurations and systems to minimize impact to the end user and allow a side-by-side operations of the old infrastructure and the new infrastructure.

We worked closely with the onsite IT department, to make sure that they understood all aspects of the project so that they can support the infrastructure once the project was completed.

THE AIM OF A GOOD IT INFRASTRUCTURE IS BASED ON ENHANCEMENTS, SCALABILITY, VERSITILITY AND PERFORMANCE.

Enhanced service levels: Transforming IT infrastructure will give organizations the opportunity to implement cutting-edge technology and streamline their IT operations. This can help improve their internal and external service levels. Internal service level improvements will drive employee productivity and enable better collaboration.

Enable boundaryless IT: Technologies such as Cloud and Software Defined Infrastructure will enable the creation of a boundaryless IT function by breaking down silos and providing a better view of the organization's overall strategic vision. It will allow the organization to collaborate better with their stakeholders and enable innovation.

Enhance Productivity: The increasing use of autonomic platforms and cognitive systems can automate manual, repetitive tasks and enable IT staff to focus on projects that drive innovation for business. It will also drastically reduce IT outages by eliminating the possibility of human errors.
